

Savina Clinic opening at Malta International Airport in October 2013.

Planmeca delivered to Maltese Savina Clinic

Dental and Implantology Centre Savina Clinic recently opened a new high-end clinic at Malta International Airport. Planmeca Compact™ dental units were chosen to the clinic for their clean and professional design and excellent functionality.

Savina Clinic, originally established in Gozo, Malta in 1985, specializes in implantology, periodontics and dental prosthetics. Dr **Joseph Xuereb**, dental and implant surgeon and owner of the clinic wanted to open new premises offering prompt, high quality and affordable dentistry for both local and international customers.

He was looking for dental units that would fit well with the clinic's competent reputation. Dr Xuereb traveled to Helsinki, Finland to try out Planmeca's dental units – and was very impressed with their ergonomics, design and wheelchair-friendliness. "The units are really comfortable and not at all bulky. They are suitable with our interior design concept and they give a very professional image. Beautiful units!" Xuereb comments about the design of Planmeca's units.

Four **Planmeca Compact™** dental units were delivered to Savina Clinic which opened in October 2013 in SkyParks Business Centre at Malta Airport. The clinic consists of four treatment rooms but it is already expanding: two more rooms are prepared for Planmeca's dental units to arrive. A separate entrance and waiting room are offered for VIP clients and there are also facilities for disabled persons, including Planmeca's dental units which are fully adaptable to all wheelchairs. Clinic's central location makes it easily accessible from all parts of the island and proximity to the airport also attracts international customers.

In the clinic's opening ceremony **Joseph Muscat**, the Prime Minister of Malta, concluded that the new clinic sets the standard for Maltese dental care higher. According to him the clinic also works as a great example in promoting Malta in the field of medical and dental tourism.
